

LifeManager

Console app written in C# for managing your life efficiently – tasks, sleep, and money – all in one place.

Description

LifeManager is a simple console-based application created as a learning project. It allows the user to: - Add and view daily tasks - Record and view sleep entries - Track expenses and remaining budget

This project integrates core C# concepts such as classes, methods, encapsulation, lists, and exception handling.

⚙ Features

- Task Management (add & display)
 - Sleep Logging with validation
 - Budget control with safety checks
 - Basic interactive menu in console
-

How to Run

1. Make sure you have [.NET SDK](#) installed.
2. Open terminal or PowerShell in the root of the project.
3. Type:

```
dotnet run
```

🔧 Technologies

- Language: C#
 - Runtime: .NET 8.0
 - IDE: Visual Studio Code or any C#-compatible editor
-

💻 Author

Created by **Tomáš Pečinka** as part of his C# developer training journey.

Feel free to use this project as a base or inspiration for your own console apps.
